

EB0026 Control Panel

With integrated SMS fault notification

Adveco provide prewired hot water control solutions. The EB0026 provides a text message and/or email alert in case of system fault to inform offsite personnel of the problem.

Designed to reduce down-time of a hot water system due to fault, the EB0026 functions as a mains wiring centre and provides power to a water heating installation. Using the integrated SMS module it will monitor the fault condition of a connected water heater or boiler and keep off-site facilities management informed of any failures. It is delivered pre-wired and packaged within an IP65-rated box with hanging brackets, and is suitable for use with the BFC/SGS/SGE and UB range of appliances. It includes a system isolator, overload protection and external aerial.

FEATURES

- Healthy signal sent monthly
- SMS and/or email notification of fault
- Isolator for electrical supply to hot water system
- Volt free contacts for BMS fault output
- External antenna with 1.5m cable
- Panel lock
- Power supply
- GSM module

Order code	EB0026
Voltage	230V 1ph
Trip Rating	6A
Full Load Current	2A
Aerial	1.5m lead magnet attachment
Height	325 mm
Width	250 mm
Depth	160 mm
Weight	5 kg
Suitable for use with:	BFC, SGS, SGE, UB
